SUMMARY

Started abseiling in my teenager years under an older friend supervision to make some money during vacation periods in highschool and soon enough I was trapped by this amazing lifestyle. I mean , gave up the Air Force Academy back in Romania and found myself in Cyprus for my first job as a technician painting telecom towers and building a climbing gym. Got lucky with a job in Qatar at LUSAIL Sports Arena where I felt more confident as it was construction related . Down the road I got lost in beautiful London for several years , 7 to be precise. When you have the best office around , looking over London sometimes you lose what you're looking for . Best place to gain more experience in construction industry, managing jobs , logistics , supervising . Back on the road and at the moment in The Netherlands looking forward to what's coming next.

Finished my GWO Blade Repair and GWO BST module for my next professional step into the wind industry.

Looking to work on offshore related works . Confident I can be a valuable person as I am passionate about my work , eager to learn and pass my limits . Open and available to work and travel in different environments.
